Investment update - September

September saw geopolitical tensions continue to make headlines with North Korea's increasingly audacious nuclear testing and President Trump's thinly veiled inflammatory tweets fuelling tensions further. On the economic front, the global outlook remains humble with GDP growth rates hovering around 2%, suggesting that developed economies are still struggling to operate independent of any monetary and fiscal assistance. Closer to home, the UK's economic growth prospects remain uncertain due to a number of factors including; weak levels of labour activity, the drag in activity attributable to Brexit, the decline in real wage growth and higher imported inflation compounded by a weak pound. In the wake of these economic and geopolitical headwinds, no changes were made to the strategy's asset allocation with equity market exposure remaining at 40%. A wide range of fixed interest and alternative investments continue to make up the majority of the strategy's underlying holdings, which reflects our continued cautious positioning during this period of market flux.

Balanced Strategy

Bordier UK Managed Portfolio Service

Our Bordier UK Managed Portfolio Service (BMPS) has been awarded the maximum Defaqto 5 stars as a solution for advisers to manage client assets directly with Bordier UK. The service invests actively in collective investment funds, which helps to ensure that investors benefit from a diversified spread of investments across a wide range of different asset classes, not just in the UK but in overseas markets as well.

There are five investment strategies for you to choose from. Each has its own risk profile and all of them are actively managed by us to ensure that we meet your investment goals. You can choose an income option in all of our risk strategies, which means that you could benefit from regular income from your investments as well as potential long-term capital growth.

Investment objective

The objective is to build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect reasonable correlation to stockmarket behaviour and rewards, including quite sharp fluctuations in values, but also some protection in times of market weakness.

Risk category

The strategy is managed with a medium attitude towards risk with a maximum target of 60% invested in global equity markets at any given time.
