Investment update - February

February saw stockmarkets further recover some of the ground lost towards the end of 2018. This is due, in large, to the combined effect of productive trade talks between the US and China as well as the US Federal Reserve seemingly taking a more measured stance to the pace of policy change. Furthermore, with the UK scheduled to leave the European Union at the end of March, the prospect of exiting without a deal seems unlikely, with observers believing that there is an increased chance of an extension to Article 50; consequently, sterling has strengthened against the US dollar. The introduction of currency hedges on approximately a third of our US equity exposure in January has proven sensible so far. The defined return funds within our alternatives exposure have performed as expected and over the medium term should produce positive, above-inflation returns, whilst reducing overall volatility. Although struggling towards the end of 2018, given short term equity risk, year to date they have rebounded strongly. These factors have contributed to the outperformance, year to date, of the RT4 strategy against the ARC Sterling Cautious PCI.

Risk Targeted Managed Service

Our Risk Targeted ('RT') Managed Service is available directly through our Bordier UK platform or via the Novia or Transact platforms. The offering provides access to our discretionary management service at a much lower entry level than would normally be available and offers cost-effective portfolio management. The portfolios:

- Offer five investment strategies with different levels of risk and expected return.
- Are rigorously mapped within a specific Dynamic Planner ('DP') risk profile tolerance.
- Can be held within general investment accounts, ISAs, SIPPs and other wrappers (platform dependent).

Investment objective

The objective is to assist investors looking to preserve their capital in real (inflation-adjusted) terms over the medium to longer term but who feel comfortable with some moderate fluctuation in values.

Risk category

The strategy is managed in accordance with DP risk profiles and is part of their Risk Target Managed ('RTM') offering. The strategy's expected volatility is targeted to stay within the assigned DP risk profile's boundaries.
