Investment update - July

Ongoing coronavirus fears led to volatility returning to global markets in July. Indeed, increased infection rates and fears around a second wave of Covid-19 knocked investor confidence, especially in Europe and the UK where markets fell. Although cases in the US continued to rise throughout July, so did markets, largely off the back of technology stocks and some stronger than predicted earnings releases. Asia continued to show further signs of recovery, supported by US dollar weakness, with Chinese manufacturing PMI data returning to pre-Covid-19 levels. Our Investment Committee continue to meet frequently, and it was agreed that although our commitment to stockmarkets would remain broadly neutral, a redistribution of equity risk would be undertaken. Therefore, the decision was made to increase exposure to areas more likely to lead the world forward as we emerge from the pandemic, such as Asia (ex-Japan) and the US, and away from regions that face longer-term headwinds, namely the UK. Outside of world equity markets, our Investment Committee remain comfortable with our fixed income positioning with an emphasis on quality, investment grade corporate bonds, which offer prospects for attractive income and capital growth. Our alternative assets should continue to provide diversification benefits and protection should we see a short-term correction in share prices.

Hybrid Passive Risk Targeted Managed Service

The service consists of five actively managed investment strategies, offering lower cost access to our discretionary fund management capabilities, through the combination of active and passive collective investments. The service provides a solution that, when cost considerations are paramount, does not compromise on quality. Investment strategies are monitored by our central Investment Committee to ensure consistency of performance from one portfolio to another. The service is available on the Aviva and Standard Life platforms.

Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stockmarket behaviour and rewards, and be entirely comfortable with substantial volatility and very limited protection in times of market weakness.

Risk profile

The strategy is managed in accordance with **Dynamic Planner risk profile 7**, with the strategy's expected volatility targeted to stay within the assigned Dynamic Planner risk profile's boundaries.

Headline positioning

- Equity exposures are now around neutral again from a combination of market moves and our recent decisions to raise more liquidity.
- Corporate fixed income exposure has increased, specifically targeting the higher quality investment grade space.
- Cash levels have been reduced to neutral.
- There remains a focus on high levels of liquidity in everything we own.
- Market neutral alternative investments are continuing to act as stabilisers. We were right to sell our structured investment funds last Autumn.
