Investment update - March

Global developed equity markets rallied 2.5% during March, recovering some of the losses seen earlier in the quarter. There was disparity in regional market returns, with the US market gaining over 3% whilst European markets fell. The US Federal Reserve, looking to address inflationary pressures, raised rates (by 0.25%) for the first time since 2018. In the UK, the latest forecasts suggest that inflation might peak at close to 9% before subsiding next year. Focus remains on how central bank policy combats these heightened levels of inflation versus supporting potentially fragile economic growth. The conflict in Ukraine is having a profound effect on energy prices, and in turn on inflation, given Russia's importance as a provider of oil and gas. Food and other commodity prices have also been significantly impacted. Financial markets have experienced a nervy start to the year; however, history dictates that it is often best to sit tight in terms of headline equity exposure during these periods. We continue to maintain equity allocations at their current level, with the strategy remaining at the upper end of its corresponding Dynamic Planner risk profile. We have, however, altered underlying equity exposures, reducing our weighting to Europe – which is currently facing the brunt of the geopolitical conflict between Russia and Ukraine – and topping up allocations to infrastructure, which not only boasts both defensive and inflation-protection characteristics, but also provides greater exposure to regions outside of Europe.

Risk Targeted Managed Service

Our Risk Targeted ('RT') Managed Service is available directly through our Bordier UK platform or via the Novia, Standard Life and Transact platforms. There are five actively managed investment strategies available, each with different levels of risk and expected return, that are rigorously mapped within a specific Dynamic Planner risk profile tolerance. Each can be held within general investment accounts, ISAs, SIPPs and other wrappers (platform dependent).

Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stock market behaviour and rewards, including significant fluctuations in value, with only moderate protection in times of market weakness.

Risk profile

The strategy is managed in accordance with DP risk profile 6 and is part of their Risk Target Managed ('RTM') offering. The strategy's expected volatility is targeted to stay within the assigned DP risk profile's boundaries.

Headline positioning

- The strategies remain at the upper end of their corresponding Dynamic Planner risk profiles with good exposure to those parts of the world less likely to be exposed to the economic fall-out from war in Ukraine.
- We have reduced or removed entirely our exposure to Europe and increased our allocations to infrastructure, which not only boasts both defensive and inflation-protection characteristics, but also provides greater exposure to regions outside of Europe.
- In our lower risk strategies, we continue to favour inflation-linked bond funds, actively managed strategic bond funds and 'market neutral' alternative investments, which continue to act as good portfolio stabilisers, diversifiers of risk and sources of return.
- Cash exposure remains low and there continues to be focus on high levels of liquidity in everything that we own.
