Investment update - December

Equity markets retreated in December in relatively thin trading. Interest rates rose by a further 0.5% in the US and UK. Inflation is receding slightly in most key regions as energy prices fall and supply chains ease. Global manufacturing backlogs are falling quite rapidly and delivery times are improving. Indeed, in the US, the Richmond Manufacturing Index (a key measure of manufacturing activity) indicated the first expansion since April. This is encouraging, albeit not yet sufficient to change the tightening stance of key developed market central banks who may also be looking for evidence of weaker labour markets before changing policy. In the UK, reported pay increases in the private sector and the expanding list of public sector workers taking industrial action is adding to concerns that wage increases could extend the period of heightened inflation. No changes were made to the strategy this month, which remains at the upper end of its corresponding Dynamic Planner risk profile. Equity market exposures have been maintained as the risks of exiting and re-entering markets may be greater than riding out further adjustment in asset prices. Our slight allocation to highly liquid alternative investment funds, that exhibit low levels of volatility, continue to act as an effective risk management tool. 2022 has seen markets attempt to price in a number of headwinds. However, the potential prospect of a significant decline in inflation over the next year, greater visibility on the likely peak in rates, and of an economic and earnings growth recovery into 2024, should provide a more favourable backdrop for markets in 2023.

Hybrid Passive Risk Targeted Managed Service

The service consists of five actively managed investment strategies, offering lower cost access to our discretionary fund management capabilities, through the combination of active and passive collective investments. The service provides a solution that, when cost considerations are paramount, does not compromise on quality. Investment strategies are monitored by our central Investment Committee to ensure consistency of performance from one portfolio to another. The service is available on the Abrdn, Aegon, Aviva, FundsNetwork, James Hay, M&G Wealth, Quilter and Transact platforms.

Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stock market behaviour and rewards, and be entirely comfortable with substantial volatility and very limited protection in times of market weakness.

Risk profile

The strategy is managed in accordance with **Dynamic Planner risk profile 7**, with the strategy's expected volatility targeted to stay within the assigned Dynamic Planner risk profile's boundaries.

Headline positioning

- The strategies remain at the upper end of their corresponding Dynamic Planner risk profiles with good exposure to those parts of the world less likely to be exposed to the economic fall-out from war in Ukraine.
- We have reduced or removed entirely our exposure to Europe and increased our allocation to Asia-Pacific ex Japan, where fundamentals and valuations look fairly attractive, and policy is more supportive for risk assets.
- In our lower risk strategies, we continue to allocate to inflation-linked bond funds, actively managed strategic bond funds and 'market neutral' alternative investments, which continue to act as good portfolio stabilisers, diversifiers of risk and sources of return.
- Cash exposure remains low and there continues to be focus on high levels of liquidity in everything that we own.
