Investment update - October

October was a weak month for both equities and bonds as the market's 'higher-for-longer' expectation around interest rates rolled over from September. While the tragic events in the Middle East have not materially affected markets to date, the added level of geopolitical uncertainty did serve to further dampen market sentiment. Stronger-than-expected economic data, particularly in the US, led to the view that a reversal in rate policy might be further away than hoped. The economic outlook in the UK continues to look challenging with inflationary pressures remaining more acute than in most other regions. Markets continue to look for more clarity in the outlook for interest rates and the global economy. While data remains mixed, we are positioned for our central view that inflation in developed regions will revert to close to central bank target levels by the end of next year and that we will see global growth of between 2-3% per annum over the next three years, a supportive level for risk assets, accompanied by a recovery in corporate earnings. This thesis leads us to continue to favour equities as an asset class with the strategy remaining at the upper end of its Dynamic Planner risk profile. We continue to actively manage our equity exposure and are targeting companies most likely to benefit from advances in artificial intelligence via a specialist active manager. This addition will complement our existing 'thematic' exposure to global infrastructure and sustainable energy. The challenging environment for both equities and bonds recently has again showed the value of holding alternative funds.

Risk Targeted Managed Service

Our Risk Targeted ('RT') Managed Service is available directly through our Bordier UK platform or via the Abrdn, Transact and Wealthtime platforms. There are five actively managed investment strategies available, each with different levels of risk and expected return, that are rigorously mapped within a specific Dynamic Planner risk profile tolerance. Each can be held within general investment accounts, ISAs, SIPPs and other wrappers (platform dependent).

Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stock market behaviour and rewards, and be entirely comfortable with substantial volatility and very limited protection in times of market weakness.

Risk profile

The strategy is managed in accordance with DP risk profile 7 and is part of their Risk Target Managed ('RTM') offering. The strategy's expected volatility is targeted to stay within the assigned DP risk profile's boundaries.

Headline positioning

- The strategies remain at the upper end of their corresponding Dynamic Planner risk profiles as we remain broadly optimistic about the economic outlook for the second half of 2024.
- We have trimmed our commitment to the US market and some thematic funds in favour of exposure to Europe and an increased allocation to Japan (excluding RT3) where opportunities have arisen.
- We continue to allocate to inflation-linked bond funds, actively managed strategic bond funds and 'market neutral' alternative investments, which continue to act as good portfolio stabilisers, diversifiers of risk and sources of return.
- Cash exposure remains low and there continues to be focus on high levels of liquidity in everything that we own.
