#### Risk Targeted Decumulation Service

The service consists of three actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular Dynamic Planner Risk Managed Decumulation ('RMD') risk profile (4-6). Each investment strategy is checked by Dynamic Planner on a monthly basis to ensure that it stays within the expected annual Value at Risk ('VaR') boundaries assigned to the corresponding Dynamic Planner risk profile.

The service is available directly through our Bordier UK platform and via third-party platforms.

#### Investment objective

To assist investors in drawdown, looking to build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect reasonable correlation to stockmarket behaviour and rewards, including moderate to sharp fluctuations in values, but also some protection in times of market weakness.

#### Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 6 and is part of their RMD offering. The strategy's expected annual VaR is targeted to stay within the assigned Dynamic Planner risk profile's boundaries.

The strategy is categorised as a Bordier Decumulation Risk Profile 3.

#### Investment update

Markets ended the year in a very positive mood with both equities and bonds performing strongly in December, adding to the excellent returns seen in November. 2023 has ultimately proved to be positive for equity investors with strong returns from most regions. However, returns have been far from uniform with growth stocks, in particular the 'magnificent seven' stocks at the top of the US index, providing a disproportionate amount of global equity returns over the year. It is encouraging to see that market leadership has broadened more recently with strength across the board. This includes some of the 'value' sectors that have lagged significantly during 2023. The key driver for markets over the year has undoubtedly been the outlook for inflation, and interest rate policy and expectations have moved from 'higher for longer' to the more recent view that central banks will reverse rate policy more significantly and earlier than expected. The more dovish outlook drove another excellent month from bonds. Coming into 2023 there were significant recession concerns across developed regions, however economic growth expectations have improved and data continues to point to an unexpected level of economic resilience. Looking ahead over the next two to three years global growth forecasts are moderate but nevertheless positive. No changes were made over the month as the strategy remains at the upper end of its corresponding Dynamic Planner risk profile. We retain a positive view on equities moving into 2024 and our positioning has been rewarded in a very strong end to the year for markets.

#### Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

\*Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 31.12.23. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.

## Why decumulation?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

## Headline asset allocation and positioning

Summary of current Investment Committee positioning

	UW (-)	N (=)	OW (+)	Key
Fixed interest			Current	Current
Equities			Current	UW (-) Underweight
Property	Current			N (=) Neutral
Alternative investments		Current		OW (+) Overweight
Cash	Current			

- The strategies remain at the upper end of their corresponding Dynamic Planner risk profiles as we remain broadly optimistic about the economic outlook for the second half of 2024.
- We have trimmed our commitment to the US market and some thematic funds in favour of exposure to Europe and an increased allocation to Japan (excluding RTD 4) where opportunities have arisen.
- We continue to allocate to inflation-linked bond funds, actively managed strategic bond funds and 'market neutral' alternative investments, which continue to act as good portfolio stabilisers, diversifiers of risk and sources of return.
- Cash exposure remains low and there continues to be focus on high levels of liquidity in everything that we own.
