Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stockmarket behaviour and rewards, and be entirely comfortable with substantial volatility and very limited protection in times of market weakness.

Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 7, with the strategy's expected volatility targeted to stay within the assigned Dynamic Planner risk profile's boundaries.

About the Hybrid Passive Risk Targeted Managed Service

Our Hybrid Passive Risk Targeted ('RT') Managed Service consists of five actively managed investment strategies (Hybrid Passive RT 3-7) that provide lower cost access to our discretionary fund management capabilities through the combination of active and passive collective investments. Each strategy has a different level of risk and expected return, and are rigorously mapped within the volatility boundaries assigned to specific Dynamic Planner risk profiles (RTM 3-7). The service provides a solution that, when cost considerations are paramount, does not compromise on quality.

Investment update

After an excellent couple of months for markets to end 2023, returns were rather more mixed in January. Economic data in January was positive overall, particularly in the US where labour and GDP data again surprised on the upside. This positive economic news did, however, also trigger renewed uncertainty over the timing and extent of a potential reversal in interest rate policy. The dovish sentiment that prevailed at the end of last year was also dampened by some cautionary comments from the US Federal Reserve at their latest policy committee meeting. The more hawkish sentiment weighed on some areas of the equity markets, taking the edge off some of the recent strong rally. The strategy remains at the upper end of its corresponding Dynamic Planner risk profile. Global stockmarket returns in 2023 were hugely distorted by the performance of a small handful of (principally US-listed 'mega cap') shares. Selectively, we expect further participation from some of the market behemoths however a turn in the interest rate cycle should particularly favour less-expensive, quality growth companies further down the market cap scale. We see opportunities across both developed and emerging markets and in thematic areas, which include infrastructure, environmental and climate change initiatives, and the beneficiaries of advances in artificial intelligence.
