

Strategy details

Inception	1 October 2020
Min. initial investment (direct)	£20,000
Min. initial investment (platform)	£1,000
Rebalancing strategy (min.)	Quarterly
Currency	£ GBP

Charges

Annual management charge (direct)	0.75%
Annual management charge (platform)*	0.30%
Ongoing charges figure	0.39%

*Not including platform fees.

Investment objective

To assist investors in drawdown, looking to preserve their capital in real (inflation-adjusted) terms over the medium to longer term but who feel comfortable with some moderate fluctuation in values.

Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 5 and is part of their RMD offering. The strategy's expected annual VaR is targeted to stay within the assigned Dynamic Planner risk profile's boundaries. The strategy is categorised as a Bordier Decumulation Risk Profile 2.

About the RTD Service

The service consists of three actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular Dynamic Planner Risk Managed Decumulation ('RMD') risk profile (4-6). Each investment strategy is checked by Dynamic Planner on a monthly basis to ensure that it stays within the expected annual Value at Risk ('VaR') boundaries assigned to the corresponding Dynamic Planner risk profile.

Investment update

2024 proved to be a good year for equities with all major developed markets ending the year in positive territory. This was despite a slight sell-off in markets at the end of December due to the US Federal Reserve projecting fewer interest rates cuts in 2025 owing to persistent sticky inflation. The US market led the way, part driven by the continued outperformance of some of the 'giant tech' companies. Economic data in the eurozone has weakened, while political chaos in both Germany and France have added a layer of uncertainty. UK market sentiment remains fragile, but valuations look similarly attractive. Concerns around the potential impact of US tariffs, and a potentially stronger US dollar, have weighed on Asian markets since the US election. Returns from fixed interest markets were muted overall in 2024 although we saw the highest level of rate cuts since 2009. Having reviewed the likely headwinds and tailwinds of a second Trump US presidency, we increased our exposure to smaller US companies in December at the expense of our sustainable/renewable energy position. The strategy remains at the upper end of its Dynamic Planner risk profile. Elsewhere, we remain positive on the outlook for fixed interest as the twin tailwinds of lower interest rates and low default rates in the corporate sector should push bond yields lower over 2025. Allocating to some low volatility absolute return funds should continue to play a valuable role during periods of market weakness.

Why decumulation?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

Performance

Inception performance

Annualised performance

	1yr	3yr*	5yr*	10yr*
RTD 5	5.6%	2.3%	-	-

Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 31.12.24. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.

Cumulative performance

	1yr	3yr*	5yr*	10yr*
RTD 5	5.6%	7.1%	-	-

Discrete performance

	2024	2023	2022*	2021*	2020*	2019*
RTD 5	5.6%	7.0%	-5.2%	5.1%	4.4%	-

*Performance from inception (01.10.20) to 31.01.22 is simulated past performance based on back-tested data (represented by the orange dashed line).
