

### Strategy details

Inception	1 October 2020
Min. initial investment (direct)	£20,000
Min. initial investment (platform)	£1,000
Rebalancing strategy (min.)	Quarterly
Currency	£ GBP

### Charges

Annual management charge (direct)	0.75%
Annual management charge (platform)*	0.30%
Ongoing charges figure	0.35%

\*Not including platform fees.

### Investment objective

To assist investors in drawdown, looking to preserve their capital in real (inflation-adjusted) terms over the medium to longer term but who feel comfortable with some moderate fluctuation in values.

### Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 5 and is part of their RMD offering. The strategy's expected annual VaR is targeted to stay within the assigned Dynamic Planner risk profile's boundaries. The strategy is categorised as a Bordier Decumulation Risk Profile 3.

### About the RTD Service

The service consists of three actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular Dynamic Planner Risk Managed Decumulation ('RMD') risk profile (4-6). Each investment strategy is checked by Dynamic Planner on a monthly basis to ensure that it stays within the expected annual Value at Risk ('VaR') boundaries assigned to the corresponding Dynamic Planner risk profile.

### Investment update

April saw substantial moves in equity markets as President Trump's tariff announcements swayed market sentiment. Bonds were also volatile, however, the benchmark index ended the month up and the sector continues to provide valuable diversification benefits. Equity markets sold off sharply after the 'Liberation Day' announcements, which proved to be broader and more substantial than expected. However, President Trump's subsequent 90-day pause on most of his tariff proposals, together with some significant exemptions, was sufficient to drive a rally in stockmarkets, with the MSCI World Index ending the month only marginally down. Amongst all the recent turmoil we have chosen to retain our exposure and ride out a period of extreme volatility. The risk of being whipsawed by recent volatility is huge and we have chosen to take a slightly longer-term view. While we haven't moved allocations within equities, we have taken some fixed income risk out of portfolios until the path for interest rates becomes a little clearer, at which point we will either reinvest back into the fixed income market or potentially into alternative investment funds. The strategy remains at the upper end of its corresponding Dynamic Planner risk profile. Having some cash on the sidelines at present is prudent and gives us some optionality during a very uncertain period. While the short-term outlook remains very uncertain, there are several potential catalysts for a continued improvement in market sentiment.

### Why decumulation?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

### Performance

#### Inception performance

#### Cumulative performance

	1yr	3yr	5yr*	10yr*
RTD 5	4.2%	10.6%	-	-

#### Discrete performance

	YTD	2024	2023	2022*	2021*	2020*
RTD 5	-0.3%	5.6%	7.0%	-5.2%	5.1%	4.4%

#### Annualised performance

	1yr	3yr	5yr*	10yr*
RTD 5	4.2%	3.4%	-	-

#### Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 30.04.25. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.

\*Performance from inception (01.10.20) to 31.01.22 is simulated past performance based on back-tested data (represented by the orange dashed line).
