Min. initial investment (platform)	£1,000
Rebalancing strategy (min.)	Quarterly
Currency	£ GBP

Charges

Annual management charge (direct)	0.75%
Annual management charge (platform)*	0.30%
Ongoing charges figure	0.39%

*Not including platform fees.

Investment objective

To assist investors in drawdown, looking to preserve their capital in real (inflation-adjusted) terms over the medium to longer term but who feel comfortable with some moderate fluctuation in values.

Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 5 and is part of their RMD offering. The strategy's expected annual VaR is targeted to stay within the assigned Dynamic Planner risk profile's boundaries. The strategy is categorised as a Bordier Decumulation Risk Profile 3.

About the RTD Service

The service consists of four actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular Dynamic Planner Risk Managed Decumulation ('RMD') risk profile (4-7). Each investment strategy is checked by Dynamic Planner on a monthly basis to ensure that it stays within the expected annual Value at Risk ('VaR') boundaries assigned to the corresponding Dynamic Planner risk profile.

Investment update

July was a positive month for equity markets with the MSCI World Index rising +2.0% in sterling terms. The clarity provided by the various international trade deals agreed with the US was a major driver of improved investor sentiment. The UK led the way in terms of returns and saw an unanticipated increase in inflation during the month. US inflation remained above the Fed's target, and the Central Bank awaits further data for clarity on the impact of tariffs on prices before making monetary policy decisions. Much like the US, the ECB has opted to maintain interest rates. Eurozone inflation held steady at 2.0%. Credit markets outperformed government bonds as spreads narrowed over the month. Eurozone government bonds and US treasury yields increased, demonstrating an improving outlook for growth but also increased apprehension of markets. We are maintaining our exposure to equity markets, and the strategy remains at the upper end of its Dynamic Planner risk profile as we believe the economic backdrop remains favourable. Having recently taken some fixed income risk out of portfolios, we have redeployed the cash into the alternative investments sector where the funds currently held continue to perform well. We are adopting a more global approach, via the addition of the Jupiter Merian Global Equity Absolute Return ('GEAR') fund, which has a proven track record of producing strong risk-adjusted returns.

Why decumulation?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

Performance

Inception performance

Cumulative performance

	1yr	3yr	5yr*	10yr*
RTD 5	5.7%	15.8%	-	-

Discrete performance

	YTD	2024	2023	2022*	2021*	2020*
RTD 5	4.5%	5.6%	7.0%	-5.2%	5.1%	4.4%

Annualised performance

	1yr	3yr	5yr*	10yr*
RTD 5	5.7%	5.0%	-	-

Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 31.07.25. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.

*Performance from inception (01.10.20) to 31.01.22 is simulated past performance based on back-tested data (represented by the orange dashed line).
