

Risk Targeted Decumulation Service

Risk Targeted Decumulation 7

December 2025

Strategy details

Inception	31 July 2025
Min. initial investment (direct)	£ 20,000
Min. initial investment (platform)	£ 1,000
Rebalancing strategy (min.)	Quarterly

Currency

£ GBP

Charges

Annual management charge (direct)	0.60%
Annual management charge (platform)*	0.30%
Ongoing charges figure	0.25%

*Not including platform fees.

Investment objective

To assist investors in drawdown, looking to build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect reasonable correlation to stockmarket behaviour and rewards, including moderate to sharp fluctuations in values, but also some protection in times of market weakness.

Risk profile

The strategy is risk target managed in accordance with independently defined annual VaR boundaries provided by Dynamic Planner. The strategy is categorised as a Bordier Decumulation Risk Profile 5, Dynamic Planner Risk Managed Decumulation 7, Defaqto Medium Sequencing Risk and Mabel Insights 4.

About the RTD Service

The service consists of four actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular risk profile. Each investment strategy is independently verified on a monthly basis to ensure that it stays within the expected annual VaR boundaries assigned to the corresponding risk profile.

Why RTD?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

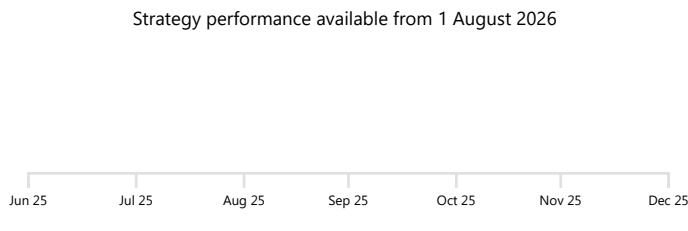

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

Investment update

The MSCI World Index rose 0.6% over December in local currency terms, however some weakness in the US dollar meant that returns to sterling investors were slightly negative. Overall returns from global fixed income assets were similarly muted. The Bank of England cut interest rates for the first time since August. This was prompted by weaker consumer and business spending, as well as further evidence of a weaker labour market. A combination of heightened rate cut expectations and some strength in mining and defence stocks did, however, send the UK market higher. The US also cut rates for the third time this year as inflation fell. The US market was flat over the month in dollar terms. The European Central Bank again kept interest rates on hold as eurozone inflation was also revised down slightly. 2025 has ultimately proved to be a good year for investors with virtually all major asset classes making positive returns. President Trump's chaotic tariff announcements earlier in the year caused significant market disruption, however global markets have since surged higher. We therefore enter the new year with a full allocation to equities. The strategy remains at the upper end of its corresponding Dynamic Planner risk profile. We continue to allocate to fixed income and low risk, uncorrelated alternative investments, which should provide protection in periods of equity market weakness.

Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 31.12.25. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.
